The monograph is a comprehensive study of approaches adopted by the Russian doctrine of international law regarding the 2013-2015 events which are directly or indirectly connected with international legal relations between Ukraine and the Russian Federation - the Revolution of Dignity in Ukraine, the use of force by Russia in Crimea, the annexation of the peninsula, and the armed conflict in parts of the Donetsk and Luhansk regions. The monograph offers an analysis of the key arguments produced to justify the “lawfulness” of Russia’s actions and expose “violations of international law by Ukraine” and evaluates the conclusions drawn by Russian researchers from the standpoint of international legal norms and principles, the practice of their application, and modern approaches in global international law. The author identifies the changes that took place in the Russian doctrine on the main issues in international legal regulation of relations between states under the influence of the 2013-2015 events and summarizes the special features of contemporary doctrinal approaches and the main tendencies of their transformation. The book is intended for everyone interested in contemporary issues in international law.

In this book, Phan Le-Ha identifies and discusses four growing self-sustained/sustaining fundamental phenomena in transnational education (TNE), namely (1) the planned, evolving and transformative mediocrity behind the endorsement of English-medium education legitimized by the interactive Asia-the West relationship; (2) the strategic employment of the terms ‘Asia/Asian’ and ‘West/Western’ by all stakeholders in their perceptions and construction of choice, quality, rigour, reliability and attractiveness of programs, courses, and locations; (3) the adjusted desire for an imagined (and often misinformed) ‘West’ among various stakeholders of transnational education; and (4) the assigned and self-realized ownership of English by otherwise normally on-the-margin groups of speakers. A focus on how these phenomena impact questions of identity and desire in TNE is a running theme. The above phenomena are discussed against the backdrop of ‘the rise of Asia’ sentiment and how this sentiment has played out in interactions and relationships between ‘the West’ and ‘Asia’ and among Asian institutions and various entities. Phan Le-Ha’s examination of the identified phenomena in TNE has been informed by her multi-layered engagement with the dialectic of the Asia-the West relationship, her critical take on certain pro-Asia and decolonisation scholarship, and her interdisciplinary and multidisciplinary approach to theorise the field and the specific topic under scrutiny. Phan Le-Ha shows that the current Asia chooses (not necessarily by force but largely by will and often with an informed and well-articulated agency) to go with the idea of the West and often desires an affiliation with the West either directly or indirectly, something that is getting more intense in the context of globalization, regionalization, and commercialization of education. The rise of Asia has made the idea of the West even more looked-for in Asia. TNE in Asia, in many ways, is the transforming and dynamic transit point, a layover that facilitates entry into a wanted destination - the West and/or the idea of the West. The West and Asia need one another more than ever in the context of the internationalization and commercialization of higher education. What’s more, the West and Asia have hardly ever been mutually exclusive but have rather been in an eventful love-and-obsession relationship with each other. This is the very dialectic proposition that Phan Le Ha takes throughout this book while paying specific attention to transnational higher education in the greater Asian region including the Middle East, following her several research projects conducted in the region since 2005 to date. Transnational Education Crossing 'the West' and 'Asia' explores: • English, Internationalisation of Higher Education, and Identity: Increasing Academic Monolingualism and English-only Package • Transnational Education and Dream Realization: From the Philippines to Vietnam, From Afghanistan to Dubai, From Everywhere in Asia to Thailand • Desiring International /Transnational Education: Theorisation of Key Concepts and Next Steps from Here The book will be of interest to researchers in the field of transnational education, Asia education and education policy.

With the proliferation of transnational Muslim networks over the last two decades, the religious authority of traditionally educated Muslim scholars, the uluma, has come under increasing scrutiny and disruption. These networks have provided a public space for multiple perspectives on Islam to be voiced, allowing "progressive" Islamic worldviews to flourish alongside more (neo)traditional outlooks. This book brings together the scholarship of leading progressive Muslim scholars, incorporating issues pertaining to politics, jurisprudence, ethics, theology, epistemology, gender and hermeneutics in the Islamic tradition. It provides a comprehensive discussion of the normative imperatives behind a progressive Muslim thought, as well as outlining its various values and aims. Presenting this emerging and distinctive school of Islamic thought in an engaging and scholarly manner, this is essential reading for any academic interested in contemporary religious thought and the development of modern Islam.

A concise introduction to the basics of open access, describing what it is (and isn't) and showing that it is easy, fast, inexpensive, legal, and beneficial. The Internet lets us share perfect copies of our work with a worldwide audience at virtually no cost. We take advantage of this revolutionary opportunity when we make our work “open access”: digital, online, free of charge, and free of most copyright and licensing restrictions. Open access is made possible by the Internet and copyright-holder consent, and many authors, musicians, filmmakers, and other creators who depend on royalties are understandably unwilling to give their consent. But for 350 years, scholars have written peer-reviewed journal articles for impact, not for money, and are free to consent to open access without losing revenue. In this concise introduction, Peter Suber tells us what open access is and isn't, how it benefits authors and readers of research, how we pay for it, how it avoids copyright problems, how it has moved from the periphery to the mainstream, and what its future may hold. Distilling a decade of Suber's influential writing and thinking about open access, this is the indispensable book on the subject for researchers, librarians, administrators, funders, publishers, and policy makers.

New York Times Bestseller • The startlingly true history of how one extraordinary man from a remote cornerof the world created an empire that led the world into the modern age. The Mongol army led by Genghis Khan subjugated more lands and people in twenty-five years than the Romans did in four hundred. In nearly every country the Mongols conquered, they brought an unprecedented rise in cultural communication, expanded trade, and a blossoming of civilization. Vastly more progressive than his European or Asian counterparts, Genghis Khan abolished torture, granted universal religious

freedom, and smashed feudal systems of aristocratic privilege. From the story of his rise through the tribal culture to the explosion of civilization that the Mongol Empire unleashed, this brilliant work of revisionist history is nothing less than the epic story of how the modern world was made.

This engaging book fills a substantial gap in the understanding of Caribbean enterprises, focusing upon FOBs (family-owned businesses) about which, despite accounting for 70% of private sector employment in the region, very little is known. Concentrating on MSMEs which represent the majority of FOBs in the English-speaking Caribbean, the authors compare and contrast their experiences to those in developed countries, focusing in particular on areas such as family business succession, business financing and marketing. Understanding the Caribbean Enterprise provides context-specific lessons from a historical perspective of business and entrepreneurship, which in turn provide an understanding of the current issues facing MSMEs and FOBs in the English-speaking Caribbean.

In this controversial new book, Daisy Christodoulou offers a thought-provoking critique of educational orthodoxy. Drawing on her recent experience of teaching in challenging schools, she shows through a wide range of examples and case studies just how much classroom practice contradicts basic scientific principles. She examines seven widely-held beliefs which are holding back pupils and teachers: - Facts prevent understanding - Teacher-led instruction is passive - The 21st century fundamentally changes everything - You can always just look it up -We should teach transferable skills - Projects and activities are the best way to learn - Teaching knowledge is indoctrination. In each accessible and engaging chapter, Christodoulou sets out the theory of each myth, considers its practical implications and shows the worrying prevalence of such practice. Then, she explains exactly why it is a myth, with reference to the principles of modern cognitive science. She builds a powerful case explaining how governments and educational organisations around the world have let down teachers and pupils by promoting and even mandating evidence-less theory and bad practice. This blisteringly incisive and urgent text is essential reading for all teachers, teacher training students, policy makers, head teachers, researchers and academics around the world.

With the assistance of this book, public libraries can provide truly outstanding service to this important population.

Afghanistan was an unwinnable war. As British and American troops withdraw, discover this definitive account that explains why. It could have been a very different story. British forces could have successfully withdrawn from Afghanistan in 2002, having done the job they set out to do: to defeat al-Qaeda. Instead, in the years that followed, Britain paid a devastating price for their presence in Helmand province. So why did Britain enter, and remain, in an ill-fated war? Why did it fail so dramatically, and was this expedition doomed from the beginning? Drawing on unprecedented access to military reports, government documents and senior individuals, Professor Theo Farrell provides an extraordinary work of scholarship. He explains the origins of the war, details the campaigns over the subsequent years, and examines the West's failure to understand the dynamics of local conflict and learn the lessons of history that ultimately led to devastating costs and repercussions still relevant today. 'The best book so far on Britain's...war in Afghanistan' International Affairs 'Masterful, irrefutable... Farrell records all these military encounters with the irresistible pace of a novelist' Sunday Times

Recent developments in computer technology are providing historians with new ways to see—and seek to hear, touch, or smell—traces of the past. Place-based augmented reality applications are an increasingly common feature at heritage sites and museums, allowing historians to create immersive, multifaceted learning experiences. Now that computer vision can be directed at the past, researchers involving thousands of images can recreate lost or destroyed objects or environments, and discern patterns in vast datasets that could not be perceived by the naked eye. Seeing the Past with Computers is a collection of twelve thought-pieces on the current and potential uses of augmented reality and computer vision in historical research, teaching, and presentation. The experts gathered here reflect upon their experiences working with new technologies, share their ideas for best practices, and assess the implications of—and imagine future possibilities for—new methods of historical study. Among the experimental topics they explore are the use of augmented reality that empowers students to challenge the presentation of historical material in their textbooks; the application of see-through computers to unlock unusual cultural knowledge, such as the secrets of vaudevillian stage magic; hacking facial recognition technology to reveal victims of racism in a century-old Australian archive; and rebuilding the soundscape of an Iron Age village with aural augmented reality. This volume is a valuable resource for scholars and students of history and the digital humanities more broadly. It will inspire them to apply innovative methods to open new paths for conducting and sharing their own research.

Using a canonical-agrarian approach, Stulac demonstrates the rhetorical and theological contribution of the Elijah narratives to the Book of Kings.

These days, it is easy to be cynical about democracy. Even though there are more democratic societies now (119 and counting) than ever before, skeptics can point to low turnouts in national elections, the degree to which money corrupts the process, and the difficulties of mass participation in complex systems as just a few reasons the system is flawed. The Occupy movement in 2011 proved that there is an empathic dissatisfaction with the current state of affairs, particularly with the economy, but, ultimately, it failed to produce any coherent vision for social change. So what should progressives be working toward? What should the economic vision be for the 21st century? After Occupy boldly argues that democracy should not just be a feature of political institutions, but of economic institutions as well. In fact, despite the importance of the economy in democratic societies, there is very little about it that is democratic. Questioning whether the lack of democracy in the economy might be unjust, Tom Malleson scrutinizes workplaces, the market, and financial and investment institutions to consider the pros and cons of democratizing each. He considers examples of successful efforts toward economic democracy enacted across the globe, from worker cooperatives in Spain to credit unions and participatory budgeting measures in Brazil and questions the feasibility of expanding each. The book offers the first comprehensive and radical vision for democracy in the economy, but it is far from utopian. Ultimately, After Occupy offers possibility, demonstrating in a remarkably tangible way that when political democracy evolves to include economic democracy, our societies will have a chance of meaningful equality for all.
