Current management accounting techniques have not been widely accepted as a means to develop a competitive advantage. The information obtained from the literature results from an empirical study that involved a sample of forty respondents from Equity Bank found that the modern management accounting practices provide very effective techniques in building competitiveness. The practices play an important role in the planning, developing, implementing and evaluating strategic competitive policies that lead to a competitive advantage. The study outlines the importance of management accounting practices in providing strategies that lead to the creation of a competitive advantage. However, the conclusions are drawn on a conceptual level and a future empirical investigation is needed to substantiate these claims further. The study also sets a foundation for research into the importance of modern management accounting practices in developing a competitive advantage especially in the banking sector.

As the world's third-ranking economic power, Japan's style of management, such as the lifetime employment system, the seniority system, and an enterprise union, has been well studied. However, little else is known about the Japanese management control systems (MCSs) and management accounting systems, which are significantly different from other economic powers. This book sheds light on Japanese MCSs and the differences with those of the United States, illustrated with examples from Mitsubishi Electric, Kao, and more. This book aids not only researchers in management accounting, but also provides more useful insight for international investors and management accountants that can prove useful in business management. Current modern companies, which are also the key factors of a global economy, are subject to increasing pressures to conduct their business in an environmentally responsible manner, due to social and environmental problems. Improving long-term environmental performance can bring economic benefits to those companies that are innovative and environmentally sensitive,
