With My Revision Notes, every student can: - Plan and manage a successful revision programme using the topic-by-topic planner - Consolidate their knowledge by working through clear and focused coverage of the OCR GCSE Economics specification - Test understanding and identify areas for improvement with regular 'Check your understanding' activities and answers, plus end-of-topic 'I can' checklists - Improve exam technique through practice questions, expert tips and examples of typical mistakes to avoid - Revise, remember and accurately use key economics terms with definitions throughout for quick and easy reference

FROM THE WINNERS OF THE 2019 NOBEL PRIZE IN ECONOMICS 'Wonderfully refreshing ... A must read' Thomas Piketty In this revolutionary book, prize-winning economists Abhijit V. Banerjee and Esther Duflo show how economics, when done right, can help us solve the thorniest social and political problems of our day. From immigration to inequality, slowing growth to accelerating climate change, we have the resources to address the challenges we face but we are so often blinded by ideology. Original, provocative and urgent, Good Economics for Hard Times offers the new thinking that we need. It builds on cutting-edge research in economics - and years of exploring the most effective solutions to alleviate extreme poverty - to make a persuasive case for an intelligent interventionism and a society built on compassion and respect. A much-needed antidote to polarized discourse, this book shines a light to help us appreciate and understand our precariously balanced world.

This handbook provides valuable information for educators to use in developing a one-semester high school course on economics. The volume includes activity outlines, a model for assessment, and a list of resources to enhance instruction in economics. The handbook identifies methods to enrich instruction using the state-mandated economic component of the California high school curriculum. Chapter 1 reviews the basic components of microeconomics, macroeconomics, economic systems, and international trade as part of the course content. Chapter 2 describes issues-oriented activities to enliven economic concepts. Ten modules provide opportunities to encourage students to study economics through the application of basic concepts. Chapter 3 identifies the conceptual, semantic, and attitudinal hurdles that can interfere with a student's learning of economics. Chapter 4 illustrates a model for the assessment of student learning in a high school economics course. An appendix identifies 53 resources and addresses for further information to enhance high school economics instruction. (CK)

"This resource book discusses the economic arguments that could (and could not) be put forth to support the case for investing in the social determinants of health on average and in the reduction in socially determined health inequalities. It provides an overview and introduction into how economists would approach the assessment of the economic motivation to invest in the social determinants of health and socially determined health inequities, including what the major challenges are in this assessment. It illustrates the extent to which an economic argument can be made in favour of investment in 3 major social determinants of health areas: education, social protection, and urban development and infrastructure. It describes whether education policy, social protection, and urban development, housing and transport policy can act as health policy"--

This book sets out to analyze how the OBOR initiative will influence the world's geo-political and geo-economic environment, with specific regard to the 'Belt and Road' countries and regions. It evaluates what opportunities the OBOR can offer them in light of the constraints they face, paying particular attention to how security issues may keep some nations from fully participating. Questions are also asked about the tension and conflict along the 'Belt' and 'Road', which, after all takes in the Middle East's most tumultuous regions, as well as the much disputed South China Sea. Finally, consideration is given as to how the world's other economic powers will react when the OBOR inevitably brings about capital and resource competitions.

The winners of the Nobel Prize in Economics uphold the most common assumptions about how economics works in this gripping and disruptive portrait of how poor people actually live. Why do the poor poor to save? Why do they miss out on free life-saving immunizations, but pay for unnecessary drugs? In Poor Economics, Abhijit V. Banerjee and Esther Duflo, two award-winning MIT professors, answer these questions based on years of field research from around the world. Called "marvelous, rewarding" by the Wall Street Journal, the book offers a radical rethinking of the economics of poverty and an intimate view of life on 99 cents a day. Poor Economics shows that creating a world without poverty begins with understanding the daily decisions facing the poor.

What determines the price of a pop concert or an opera? Why does Hollywood dominate the film industry? Does illegal downloading damage the record industry? Does free entry to museums bring in more visitors? In A Textbook of Cultural Economics, one of the world's leading cultural economists shows how we can use the theories and methods of economics to answer these and a host of other questions concerning the arts (performing arts, visual arts and literature), heritage (museums and built heritage) and creative industries (the music, publishing and film industries, broadcasting). Using international examples and covering the most up-to-date research, the book does not assume a prior knowledge of economics. It is ideally suited for students taking a course on the economics of the arts as part of an arts administration, business, management, or economics degree.

From the author of the classic The Choice and the Blade, The Real Wealth of Nations proposes a dramatic new economic model that could help resolve many of the most critical problems we face today, and offers concrete steps for putting this model into practice.Adam Smith's The Wealth of Nations provided the first, most influential and lasting explanation of the workings of modern economics. But with his focus on "the market" as the best mechanism for producing and distributing the necessities of life, Smith's concepts only told part of the story, leading to flawed economic models that devalue activities that devalue activities that fall outside of the market's parameters of buying and selling. The real wealth of nations, Riane Eisler argues, is not merely financial, but includes the contributions of people and our natural environment. Here, Eisler goes beyond the market to reexamine economics from a larger perspective--and shows that we must give visibility and value to the socially and economically essential work of caring for people and the planet if we are to meet the enormous challenges we are facing. Most importantly, she provides practical proposals for new economic inventions--new measures, policies, rules, and practices--to bring about a caring economics that fulfills human needs."Eisler delivers another impressive work that's remarkably well referenced, well argued, insightful, and hopeful." (Publishers Weekly)

Principles of Economics covers the scope and sequence for a two-semester principles of economics course. The text has been developed to meet the scope and sequence of most introductory courses.
