*Sheikh and Cole's acclaimed text-image vision of a compassionate global community, now redesigned with a new cover For the past 25 years Fazal Sheikh (born 1965) has highlighted the plight of displaced people and refugees around the world. He has photographed people driven from their homes by war as well as those upended by the redrawing of national borders and the reassertion of racial and ethnic divisions. Sheikh has also made sublime photographs of landscapes altered by political and environmental crises. In recent years, the shift to the political right in the US has been replicated across Europe, the Middle East, Central and East Africa and Southeast Asia, as authoritarian governments and xenophobia have increased. As an act of refusal of these political trends, Sheikh sought out the celebrated novelist and critic Teju Cole (born 1975) for a collaboration that would reinforce their commitment to the ideal of a compassionate global community as well as the importance of individual courage. The*

*resulting book, now reprinted with a new cover, represents the two authors' distinct visions, their shared values and mutual spirit of cooperation. With Cole's words and Sheikh's photos we are confronted with fundamental and newly necessary questions of co-existence: Who is my neighbor? Who is kin to me? Who is a stranger? What does it mean to be human?*

*The Second Edition has been rewritten to provide additional coverage of topics such as urban development and third world cities as well as social issues including homelessness, jobs/housing mismatch and transportation disadvantages. It has also been updated with 1990 Census data.*

*Using vivid testimonies and images, Briggs and Monge document the stories and situations of the people who live in Valdemingómez , placing them in a political, economic and social context.*

"Humans, like many other animals, are highly social species. But what exactly makes us social? How do our biological systems implement social behavior? And, in turn, how do these social processes impact our brain and biology? These are the questions that define the young field of social neuroscience, a field that combines the study of animal models and

humans in order to understand the neural, hormonal, cellular, and genomic mechanisms underlying social processes and behaviors such as imitation, loneliness, empathy, and cooperation. Intended for advanced undergraduates and graduate students, this is the first textbook to provide a synthetic approach to social neuroscience. Here, students and scholars are introduced to the field by examining a growing body of evidence that shows that the nervous system cannot be understood without consideration of the social environments in which humans and many animal species live. The first three chapters introduce readers to the neurological basis for social behavior and the concept of the social brain. Chapters four through six discuss how mental states are communicated between people. And chapters seven through nine cover the neural roots of social interactions and group thought patterns. Ultimately, this book demonstrates how the brain mediates social behaviour and provides a foundational textbook for this nascent field"--

Electricity in Fish Research and Management, 2nd Edition provides a comprehensive discussion of the uses of both electricity and electrical principles in fishery management and research. It covers electric fishing (including theory, equipment, data analysis and practical factors affecting efficiency), fish barriers, fish counters and fish welfare issues. The book concentrates on Electric Fishing (or Electrofishing); an internationally accepted and widely used procedure for sampling fish. Over the past 50 years electric fishing has become a standard method for fishery studies and management e.g. establishing population densities and abundance. However, due to the potential hazards of the method (both to operators and fish) there is a continuing need to develop and promote best practice guidelines. The author has studied fish ecology for 40 years and understands the need for information that reaches out to all levels of understanding in the field. Previous books on this subject have either been collections of scientific papers and/or technical reports or very simple instruction manuals. In this book theory and practice is explained using non-technical language and simple equations. It brings depth as well as breadth in both information and principles behind the methods and should be an invaluable tool to both fisheries managers and researchers. Although the book is aimed at undergraduates, the clear explanation of the factors means that the book is suitable for all levels of practitioners.
