production and the economic roots of the Bengal famine in 1943. The second part of the book deals with the factors that directly or indirectly affected crop trends. Amongst these are the effect of crop prices on area sown. Trends in

physical capacity of Bengal agriculture are analysed and compared with those in the visible supply of labour and crop output. The problem of agricultural credit is discussed and the progress of the Co-operative credit movement

the agricultural sector in this period. Famines have all but disappeared and there is now a food surplus. The green revolution too increased yield and productivity for certain crops in specific agro-climatic zones. Having said that, a

lot still needs to be done. While agricultural growth has contributed to significant decline in poverty, India still remains home to the largest number of poor. Agricultural productivity remains low in much of the rain fed areas where

poverty and malnutrition are concentrated. Land productivity is also declining in areas which are over-irrigated.

Agricultural growth must be restarted, and the benefits more fairly distributed.

According to estimates by the International Land Coalition based at the International Fund for Agricultural Development (IFAD), 57 million hectares of land have been leased to foreign investors since

2007. Current research has focused on human rights issues related to inward investment in land but has been ignorant of water resource issues and the challenges of managing scarce water. This handbook will be the first to address inward investment in land and its impact on water resources in Africa. The

geographical scope of this book will be the African continent, where land has attracted the attention of risk-taking investors because much land is under-utilised marginalized land, with associated water resources and rapidly growing domestic food markets. The successful implementation of

investment strategies in African agriculture could determine the future of more than one billion people. An important factor to note is that sub-Saharan Africa will, of all the continents, be hit hardest by climate change, population growth and food insecurity. Sensible investment in agriculture

is therefore needed, however, at what costs and at whose expense? The book will also address the livelihoods theme and provide a holistic analysis of land and water grabbing in sub-Saharan Africa. Four other themes will be addressed: politics, economics, the environment and the history of land
