Coming at a time of renewed interest in the developmental changes of the life cycle, *Psychotherapy and the Widowed Patient* is a rich resource that examines the impact of a spouse's death on an individual's mental health. Psychiatrists and psychoanalysts address a wide range of issues concerning loss, grief, and bereavement, and provide practical and creative approaches for both widowed persons and the helping professionals charged with treating their grief. Chapters in this compassionate volume discuss the

characteristics of individuals who are more likely to seek professional help in coping with grief, widowhood as a time of growth and development, the value of openness instead of denial in dealing with death, the grieving process in young widowed spouses, the similarities of widowhood to separation and divorce, the role of dependency in how well widowed patients develop emotionally, and the role of loyalty in the process of grief. The more clinical chapters examine strategies for carrying out experiential psychotherapy with widowed patients, rational-emotive therapy, grief therapy, the effects of new perspectives on spousal

bereavement on clinical practice, and aspects of bereavement response to loss, with a timeframe for viewing psychotherapeutic intervention. A review of the psychological literature regarding widowhood completes this comprehensive new book.

At a time when the Manhattan Project was synonymous with large-scale science, physicist J. Robert Oppenheimer (1904–67) represented the new sociocultural power of the American intellectual. Catapulted to fame as director of the Los Alamos atomic weapons laboratory, Oppenheimer occupied a key position in the compact between science and the state that developed out of World War II. By

tracing the making—and unmaking—of Oppenheimer ’ s wartime and postwar scientific identity, Charles Thorpe illustrates the struggles over the role of the scientist in relation to nuclear weapons, the state, and culture. A stylish intellectual biography, Oppenheimer maps out changes in the roles of scientists and intellectuals in twentieth-century America, ultimately revealing transformations in Oppenheimer ’ s persona that coincided with changing attitudes toward science in society. “ This is an outstandingly well-researched book, a pleasure to read and distinguished by the high quality of its observations and judgments. Thorpe ’ s book provides the best perspective yet for understanding Oppenheimer ’ s Los Alamos years, which were critical, after all, not only to his life but, for better or worse, the history of mankind. ” —Catherine Westfall, Nature

both during conflicts and in peacetime, and reliance on ISR capabilities is expected to increase in the future. ISR capabilities are critical to 3 of the 12 Service Core Functions of the U.S. Air Force: namely, Global Integrated ISR (GIISR) and the ISR components of Cyberspace Superiority and Space Superiority, and contribute to all others. In response to a request from the Air Force for ISR and the Deputy Assistant Secretary of the Air Force for Science, Technology, and Engineering, the National Research Council formed the Committee on Examination of the Air Force Intelligence, Surveillance, and Reconnaissance (ISR) Capability Planning and Analysis

In this report, the committee reviews the current approach to the Air Force corporate planning and programming process for ISR capability generation; examines various analytical methods, processes, and models for large-scale, complex domains like ISR; and identifies the best practices for the Air Force. In *Capability Planning and Analysis to Optimize Air Force Intelligence, Surveillance, and Reconnaissance Investments*, the current approach is analyzed and the best practices for the Air Force corporate planning and programming processed for ISR are recommended. The years following the attacks of September 11, 2001 have seen the publication of a wide range of scientific analyses of terrorism. Literary studies

seem to lag curiously behind this general shift of academic interest. The present volume sets out to fill this gap. It does so in the conviction that the study of literature has much to offer to the transdisciplinary investigation of terror, not only with respect to the present post-9/11 situation but also with respect to earlier historical contexts. Literary texts are media of cultural self-reflection, and as such they have always played a crucial role in the discursive response to terror, both contributing to and resisting dominant conceptions of the causes, motivations, dynamics, and aftermath of terrorist violence. By bringing together experts from various fields and by combining case studies of works from diverse periods and national literatures, the volume *Literature and Terrorism* chooses a

It is interested in the specific cultural work performed by narrative and dramatic literature in the face of terrorism, focusing on literature's ambivalent relationship to other, competing modes of discourse. This book examines the expression of a Jewish identity in French films and the characteristics used by filmmakers to portray this nebulous concept in movies produced after the Shoah and World War II. Throughout a sixty-year span, French directors struggled to define Jewish identity and a correlation with the larger question of French national identity. The study delves into

the larger question of Jewish identity as characterised in works of cinematic fiction in accordance with the history of the Jews of France, using the centrality of the emancipation paradigm of 1791 and the theoretical frame provided by Jean-Paul Sartre's *Réflexions sur la question juive*. The book identifies and describes three categories of films produced between 1950 and 2010 that represent the manner in which directors portrayed an evolving Jewish identity and its relation to French society, rejecting the practice of labeling a film as "Jewish" because of the ethnicity of a director or writer. Based on extensive research including the review of over 200 full-length films, the book provides an overview of features addressing the concept of Jewish identity and includes a Descriptive Filmography of

productions matching the author's definition of a Jewish-identity film. From the template *La Grande Illusion* to contemporary releases, the book argues that French Jewish-identity films dwell in the sociological realm of Jewishness, as the epicenter of tension is rooted in identity rather than religion.

This volume provides a comprehensive account of how scholarship on affect and scholarship on texts have come to inform one another over the past few decades. The result has been that explorations of how texts address, elicit, shape, and dramatize

affect have become central to contemporary work in literary, film, and art criticism, as well as in critical theory, rhetoric, performance studies, and aesthetics. Guiding readers to the variety of topics, themes, interdisciplinary dialogues, and sub-disciplinary specialties that the study of interplay between affect and texts has either inaugurated or revitalized, the handbook showcases and engages the diversity of scholarly topics, approaches, and

projects that thinking of affect in relation to texts and related media open up or enable. These include (but are not limited to) investigations of what attention to affect brings to established methods of studying texts—in terms of period, genre, cultural contexts, rhetoric, and individual authorship.

This interdisciplinary collection of 19 essays addresses violence on the American stage. Topics include the revolutionary period and the role of

violence in establishing national identity, violence by and against ethnic groups, and females as perpetrators and victims, as well as state and psychological violence and violence within the family. The book works to assess whether representing violence may cause its cessation, or whether it generates further destruction. Featured playwrights include Susan Glaspell, Sophie Treadwell, Tennessee Williams, William Inge, Amiri

The Sixth Stage of Grief
Hearings

In this groundbreaking new work, David Kessler—an expert on grief and the coauthor with Elisabeth Kübler-Ross of the iconic *On Grief and Grieving*—journeys beyond the classic five stages to discover a sixth stage: meaning. In 1969, Elisabeth Kübler Ross first identified the stages of dying in her transformative book *On Death and Dying*. Decades later,

she and David Kessler wrote the classic *On Grief and Grieving*, introducing the stages of grief with the same transformative pragmatism and compassion. Now, based on hard-earned personal experiences, as well as knowledge and wisdom earned through decades of work with the grieving, Kessler introduces a critical sixth stage. Many people look for “closure” after a loss. Kessler argues that it’s finding meaning beyond the stages of grief most of us are familiar with—denial, anger, bargaining, depression, and acceptance—that can transform grief into a more peaceful and hopeful experience. In this book, Kessler gives readers a roadmap to remembering those who have

died with more love than pain; he shows us how to move forward in a way that honors our loved ones. Kessler's insight is both professional and intensely personal. His journey with grief began when, as a child, he witnessed a mass shooting at the same time his mother was dying. For most of his life, Kessler taught physicians, nurses, counselors, police, and first responders about end of life, trauma, and grief, as well as leading talks and retreats for those experiencing grief. Despite his knowledge, his life was upended by the sudden death of his twenty-one-year-old son. How does the grief expert handle such a tragic loss? He knew he had to find a way through this

unexpected, devastating loss, a way that would honor his son. That, ultimately, was the sixth state of grief—meaning. In *Finding Meaning*, Kessler shares the insights, collective wisdom, and powerful tools that will help those experiencing loss. *Finding Meaning* is a necessary addition to grief literature and a vital guide to healing from tremendous loss. This is an inspiring, deeply intelligent must-read for anyone looking to journey away from suffering, through loss, and towards meaning.

The Oklahoma City bombing, intentional crashing of airliners on September 11, 2001, and anthrax attacks in the fall of 2001 have made Americans acutely

aware of the impacts of terrorism. These events and continued threats of terrorism have raised questions about the impact on the psychological health of the nation and how well the public health infrastructure is able to meet the psychological needs that will likely result. Preparing for the Psychological Consequences of Terrorism highlights some of the critical issues in responding to the psychological needs that result from terrorism and provides possible options for intervention. The committee offers an example for a public health strategy that may serve as a base from which plans to prevent and respond to the psychological consequences of a variety of terrorism events

can be formulated. The report includes recommendations for the training and education of service providers, ensuring appropriate guidelines for the protection of service providers, and developing public health surveillance for preevent, event, and postevent factors related to psychological consequences. Negotiated by social, cultural and economic actors, globalization is a complex and open-ended process, argues this diverse group of international scholars. Forest fires cause ecological, economic, and social damage to various states of the international community. The causes of forest fires are rather varied, but the main factor is human activity in settlements, industrial facilities,

objects of transport infrastructure, and intensively developed territories (in other words, anthropogenic load). In turn, storm activity is also a basic reason for forest fires in remote territories. Therefore, scientists across the world have developed methods, approaches, and systems to predict forest fire danger, including the impact of human and storm activity on forested territories. An important and comprehensive point of research is on the complex deterministic-probabilistic approach, which combines mathematical models of forest fuel ignition by various sources of high temperature and probabilistic criteria of forest fire occurrence. Forest Fire Danger

Prediction Using Deterministic-Probabilistic Approach provides a comprehensive approach of forest fire danger prediction using mathematical models of forest fuel with consideration to anthropogenic load, storm activity, and meteorological parameters. Specifically, it uses the deterministic-probabilistic approach to predict forest fire danger and improve forest protection from fires. The chapters will cover various tree types, mathematical models, and solutions for reducing the destructive consequences of forest fires on ecosystems. This book is ideal for professionals and researchers working in the field of forestry, forest fire danger researchers, executives,

computer engineers, practitioners, government officials, policymakers, academicians, and students looking for a new system to predict forest fire danger. Consciously or unconsciously, humans always pay attention to a wide variety of stimuli. Attention is part of daily life and it is the first step to understanding. The proposed thesis deals with a computational approach to the human attentional mechanism and with its possible applications mainly in the field of computer vision. In a first stage, the text introduces a rarity-based three-level attention model handling monodimensional signals as well as images or video sequences. The concept of attention is

Get Free Recent Tragic Events

defined as the transformation of a huge acquired unstructured data set into a smaller structured one while preserving the information: the attentional mechanism turns rough data into intelligence. Afterwards, several applications are described in the fields of machine vision, signal coding and enhancement, medical imaging, event detection and so on. These applications not only show the applicability of the proposed computational attention method, but they also support the idea that similarly to the fact that attention is the beginning of intelligence in humans, computational attention may be the starting point of artificial intelligence in engineering applications. Several databases

containing different kinds of signals were used to test the model and its applications: audio signals of natural complex ambiences and events, real-life video sequences as well as simulated sequences and finally natural scenes, textured or synthetic images. Results are presented in a clear and comprehensive way within each application providing the relevance of the use of the computational attention model. Finally, a large discussion is opened based on the theoretical and practical achievements and future extensions are proposed.
