The secret CIA papers that prove that the government has been tracking UFOs and extraterrestrials over 50 years. In autumn 2016 the CIA sent to its website ([www.cia.gov/library/readingroom](http://www.cia.gov/library/readingroom)) electronic files previously released under the Freedom of Information Act but housed at the National Archives. Among a variety of subjects were "unidentified flying objects." Finally, a stockpile of documents and correspondences were available for serious UFO researchers to examine at home. This book consists of selections from those secret files. Dan Wright spent 18 months selecting, editing, and organizing the 550 files that are relevant to UFO research and has produced a chronological collection of CIA documents spanning 1949 to 2000. Each chapter focuses on a particular year. The summary of documents for each year is followed by a section called "While You Were Away from Your Desk."

provides historical and cultural context for the document summaries and examines other significant contacts that are not mentioned in the CIA files. Among the fascinating tidbits are: A memo to Hoover about flying saucer reports The 1949 conference at Los Alamos that include Edward Teller, upper atmosphere physicist Dr. Joseph Kaplan, and other renowned scientists in which the panel debated whether recent incidents were natural phenomena or UFO sightings This is a must-read for those fascinated by the history of UFO sightings and those interested in government secret cover-ups.

Offering the comprehensive, authoritative information needed for effective diagnosis, treatment and management of sick and premature infants, *Fetal and Neonatal Physiology*, 6th Edition, is an indispensable resource for board review, clinical rounds, scientific research, and day-to-day practice. This two-volume text synthesizes recent advances in the field into definitive guidance for today's busy practitioner, focusing on the basic science needed for exam preparation and key information needed for full-time practice. It stands alone as the most complete text available in this complex and ever-changing field, yet is easy to use for everyday application. Offers definitive guidance on how to effectively manage the many health problems seen in newborn and premature infants. Contains chapters on Pathophysiology of Genetic Neonatal Disease, Genetic Variants and Neonatal Disease, Developmental Biology of Lung Stem Cells, as well as significantly revised chapters on Cellular Mechanisms of Neonatal Brain Injury, Neuroprotective Therapeutic Hypothermia, Enteric Nervous System Development and Gastrointestinal Motility, and Physiology of Twin-Twin Transfusion. Features 1,000 full-color diagrams, graphs and anatomic illustrations, 170+ chapters, and more than 300 contributors. Includes chapters devoted to clinical correlation that help explain the implications of neonatal physiology, as well as clinical applications boxes throughout. Provides summary at the end of each chapter and extensive cross-referencing between chapters for quick reference and review. Allows you to apply the latest insights on genetic therapy, intrauterine infections, brain protection and neuroimaging, and much more.

**Monthly magazine devoted to topics of general scientific interest.**

**The sirtuin family of proteins (SIRT1-7) received a lot of attention in recent years as they serve as metabolic sensors that control not only metabolism, but also aging and lifespan regulation. As such, sirtuins are strong targets for the treatment of age-related metabolic diseases, including obesity, diabetes, and cancer. Indeed, many research groups as well as pharmaceutical companies discovered food components and/or drugs that target the sirtuins and provide significant health benefits. This book focuses on various aspects of sirtuin biology, from basic biochemistry, via molecular function, to its role in (fighting) human disease.**
