Looking at the question of how to achieve the best use of limited resources in the health service, this text argues that value for money is not just an accounting issue. Rather, it is a crucial tool in establishing how to identify and measure what is effective and efficient within the NHS.

This guide is intended as a companion to Planning Policy Guidance (PPGs) [and subsequent Planning Policy Statements (PPSs)] and aims to encourage better design and to stimulate thinking about urban design. The guide is relevant to all aspects of the built environment, from the design of buildings and spaces, landscapes, to transport systems; and for planning and development at every scale, from streets and their neighbourhoods, villages and cities, to regional planning strategies.

This handbook serves as a guide to deploying battery energy storage technologies, specifically for distributed energy resources and flexibility resources. Battery energy storage technology is the most promising, rapidly developed technology as it provides higher efficiency and ease of control. With energy transition through decarbonization and decentralization, energy storage plays a significant role to enhance grid efficiency by alleviating volatility from demand and supply. Energy storage also contributes to the grid integration of renewable energy and promotion of microgrid.

This international handbook is essential for geotechnical engineers and engineering geologists responsible for designing and constructing piled foundations. It explains general principles and practice and details current types of pile, piling equipment and methods. It includes calculations of the resistance of piles to compressive loads, pile group Estimators need to understand the consequences of entering into a contract, often defined by complex conditions and documents, as well as to appreciate the technical requirements of the project. Estimating and Tendering for

Construction Work, 5th edition, explains the job of the estimator through every stage, from early cost studies to the creation of budgets for successful tenders. This new edition reflects recent developments in the field and covers: new tendering and procurement methods the move from basic estimating to cost-planning and the greater emphasis placed on partnering and collaborative working the New Rules of Measurement (NRM1 and 2), and examines ways in which practicing estimators are implementing the guidance emerging technologies such as BIM (Building Information Modelling) and estimating systems which can interact with 3D design models With the majority of projects procured using design-and-build contracts, this edition explains the contractor's role in setting costs, and design statements, to inform and control the development of a project's design. Clearly-written and illustrated with examples, notes and technical documentation, this book is ideal for students on construction-related courses at HNC/HND and Degree levels. It is also an important source for associated professions and estimators at the outset of their careers.

A wonderful novel and perfect book club choice, The Right Stuff is a wildly vivid and entertaining chronicle of America's early space programme. WITH AN INTRODUCTION BY US ASTRONAUT SCOTT KELLY 'What is it,' asks Tom Wolfe, 'that makes a man willing to sit on top of an enormous Roman Candle...and wait for someone to light the fuse?' Arrogance? Stupidity? Courage? Or, simply, that quality we call 'the right stuff'? A monument to the men who battled to beat the Russians into space, The Right Stuff is a voyage into the mythology of the American space programme, and a dizzying dive into the sweat, fear, beauty and danger of being on the white-hot edge of history in the making. A guide to loft conversions that provides building control officers, builders and DIY enthusiasts with guidance on achieving compliance with the Building Regulations. Starting with chapters on the existing structure and proposed structure, it is divided into chapters on the main considerations for a loft conversion. The Loft Conversion Project Guide is an easy-to-use guide to loft conversions and provides building control, builders and DIY enthusiasts with up-to-date and reliable guidance on achieving compliance with the Building Regulations. The need for industry to develop a project guide for loft conversions was identified in the Future of Building Control Implementation Plan, published by Communities and Local Government (CLG) in 2009. As a direct outcome of the Plan, the Construction Products Association has developed this guide, which is supported by the CLG, in collaboration with the National House Building Council, Local Authority Building Control, Energy Saving Trust, Association of Consultant Approved Inspectors and the Federation of Master Builders. It brings together solutions offered in the Approved Documents and third tier guidance, such as industry literature, in one concise and fully illustrated guide. Starting with chapters on the existing structure and proposed structure, the guide is then divided into chapters on the main considerations for a loft conversion, covering topics such as fire safety, windows and doors, and insulation. This is an essential read for anyone looking for a guide which simplifies the building regulations process and offers solutions, where applicable, to achieve minimum, good and best standards for construction.
