This book evaluates the evolution of 'Big Business in Asia', as we enter the new millennium. It focuses on recent issues affecting large corporations, both indigenous and foreign owned, such as multinational companies and international joint ventures, as well as on key events such as the Asian Crisis and its aftermath, China's entry into the WTO, the recent downturn in the world economy and the onset of SARS. A special issue of the journal Asia Pacific Business Review. Humans are the best functioning example of multimedia communication and computing - that is, we understand information and experiences through the unified perspective offered by our five senses. This innovative textbook presents emerging techniques in multimedia computing from an experiential perspective in which each medium - audio, images, text, and so on - is a strong component of the complete, integrated exchange of information or experience. The authors' goal is to present current techniques in computing and communication that will lead to the development of a unified and holistic approach to computing using heterogeneous data sources. Gerald Friedland and Ramesh Jain introduce the fundamentals of multimedia computing, describing the properties of perceptually encoded information, presenting common algorithms and concepts for handling it, and outlining the typical requirements for emerging applications that use multifarious information sources. Designed for advanced undergraduate and beginning graduate courses, the book will also serve as an introduction for engineers and researchers interested in understanding the elements of multimedia and their role in building specific applications.

First published in 1990, this book provides an overview of the global distribution of the electronics industry and the structural factors which promoted this distribution by the end of the 1980s. Regarded as a 'flagship' sector in both advanced and developing countries, the electronics industry is encouraged by governments everywhere. Covering both the civilian and the military sides of the industry, Professor Todd reflects on the future of civilian electronics in the light of its global segmentation, and hints at the fundamental role of governments in the unfolding of both civilian and defence-electronics developments. He also endorses the overwhelming significance of strategies being played by electronics enterprises in both the USA and Japan.

This stunning visual guide explores and explains the greatest inventions, ideas, and discoveries throughout the ages, and introduces their inventors. Discover the first tools, and the wheel to ploughs and paper, that shaped societies and grew mighty civilizations and empires such as those in ancient Greece, ancient Rome, and ancient followed, "Eureka" moments abounded, with James Watt's steam engine during the Industrial Revolution, Henry Ford's car assembly line at the start of the 20th century flying machines, Thomas Edison's light bulb, John Logie Baird's television, and so much more. Read about more recent, era-defining moments during the Digital Revolution website developed by Tim Berners-Lee, and the growth in the use of robotics in industry and at home. Inventions A Children's Encyclopedia reveals the stories behind contraptions, products of the world's most brilliant minds.

The protection of clean water, air, and land for the habitation of humans and other organisms has become a pressing concern amid the intensification of industrial activity growing world population. The integration of environmental science with engineering principles has been introduced as a means of long-term sustainable development. on Advancements in Environmental Engineering creates awareness of the role engineering plays in protecting and improving the natural environment. Providing the latest findings, this book is an essential reference source for executives, educators, and other experts who seek to improve their project's environmental costs.

This work is not only a guide for tourists who come to Sardinia for the first time, but also for those who have become accustomed to looking at its beauty absently, without the motivation to continue discovering its other hidden gems. It is also a list of suggestions for the sportsman, with itineraries by kayak, mountain bike, trekking and trail running, all accompanied by photographs and GPS points to facilitate the visit. The descriptions of places, the history and the thousand-year-old culture of the Sardinians also becomes an opportunity to understand the changes that have shaped the current face of a Sardinia full of magic.
