We’re used to thinking of the United States in opposing terms: red versus blue, haves versus have-nots. But today there are three Americas. At one extreme are the brain hubs—cities like San Francisco, Boston, and Durham—with workers who are among the most productive, creative, and best paid on the planet. At the other extreme are former manufacturing capitals, which are rapidly losing jobs and

research shows that you don't have to be a scientist or an engineer to thrive in one of the brain hubs. Carpenters, taxi-drivers, teachers, nurses, and other local service jobs are created at a ratio of five-to-one in the brain hubs, raising salaries and standard of living for all. Dealing with this split-supporting growth in the hubs while arresting the decline elsewhere—is the challenge of the century, and *The New Geography of Jobs* lights the way. This ism-busting text is

Each chapter is written by a Population Geographer together with a scholar representing another Human Geography sub-discipline thus providing a cross-disciplinary perspective on a specific aspect of migration. Critically reviewing and setting an agenda for internal migration scholarship from a spatial perspective, this book will be of interest to academics and students of Geography and other disciplines concerned with migration, both within the UK and further afield.

It also analyzes how physical manifestations of societal activity impact on understandings of individual and societal landscapes and addresses the essential aspect of the social construction of landscape, cultural specificity, which in turn is discussed in the context of the expansion of a western landscape concept. effects of the economic globalisation process, showing how it challenges the survival of the sovereign nation-state and how it may be encouraging the development of new political associations at a localised as well as at a transnational level. The unexpected eruption of separatist movements among national minorities is examined, as well as the more intimate identifications associated with the politics of place. The failure of attempts to transplant the European nation-state system to parts of the colonial world is discussed in a chapter which focuses on the current plight of the 'collapsed' states of Africa. The recent revival of interest in geopolitics is described, with a

review of the history of the approach and an exploration of the new 'critical geopolitics'. Special emphasis is given to the politics of the environment and the ways in which the environmental movement has been poorly served by the political structures and division of political power in the twentieth-century world. The book concludes with an overview of the 'New Political Order' and the changes engendered by the collapse of the Soviet bloc. Published twenty years after the same author's highly successful *Modern Political Geography*, this completely new text will be welcomed by a new generation of students for applying the same clarity of thought and

How do borders affect trade? Are cultural and institutional differences important for trade? Is environmental policy relevant to trade? How does one's income or wage relate to the fact that trade partners are nearby or far away? These are just some of the important questions that can be answered using the gravity model of international trade. This model predicts and explains bilateral trade flows in terms of the economic size and distance between trading partners (e.g. states, regions, countries, trading blocs). In recent years, there has been a surge of interest in this model and it is now one of the most

economic geography. This volume brings together the systematic theme of spatial aspects of the interactions between water occurrence and human activity.

Simply stated, geography studies the locations of things and the explanations that underlie spatial distributions. Profound forces at work throughout the world have made geographical knowledge increasingly important for understanding numerous human dilemmas and our capacities to address them. With more than 1,200 entries, the Encyclopedia of Geography reflects how the growth of geography has propelled a demand for intermediaries between the abstract language of academia

Geography Drawing on nearly three decades of instructional experience and a wealth of testing pedagogical innovations with students, Mark Boyle has revised and expanded this authoritative and comprehensive introduction to Human Geography. As with the First Edition, Boyle follows the premise that “history makes geography whilst geography makes history,” and that the key to studying the principal demographic, social, political, economic, cultural and environmental processes in any region in the world today is to look at how that region

has been impacted by, and in turn has impacted, the story of the rise, reign, and decline of the West. Moreover he argues that Human Geography itself is best understood as both an intellectual endeavour and a historical, political, and institutional project. Informed by recent developments in post-colonial scholarship, the book covers key concepts, seminal thinkers, and influential texts in the field. Although designed for the beginner student, Boyle does not shy away from ideas and debates often avoided in introductory texts, clearly communicating theory without

To date, geography has not yet carved out a disciplinary niche within the diffuse domain that constitutes global health. However, the compulsion to do and understand global health emerges largely from contexts that geography has long engaged with: urbanisation, globalisation, political economy, risk, vulnerability, lifestyles, geopolitics, culture, governance, development and

the environment. Moreover, global health brings with it an innate, powerful and politicising spatial logic that is only now starting to emerge as an object of enquiry. This book aims to draw attention to and showcase the wealth of existing and emergent geographical contributions to what has recently been termed 'critical global health studies'. Geographical perspectives, this collection argues, are essential to bringing new and critical perspectives to bear on the inherent complexities and interconnectedness of global health problems and purported solutions. Thus,

rather than rehearsing the frequent critique that global health is more a 'set of problems' than a coherent disciplinary approach to ameliorating the health of all and redressing global bio-inequalities; this collection seeks to explore what these problems might represent and the geographical imaginaries inherent in their constitution. This unique volume of geographical writings on global health not only deepens social scientific engagements with health itself, but in so doing, brings forth a series of new conceptual, methodological and empirical
